

# Committing Basics Exercise

1. Create a new folder called `shopping`
2. Initialize a new git repo inside of the `shopping` folder (make sure you're not already inside of a Git repo!)
3. Make a new file called `yard.txt`
4. Make another new file called `groceries.txt`
5. Make a commit that includes both empty files. The message should be "create yard and groceries lists"
6. In the `yard.txt` file, add the following changes:
  - 2 bags of potting soil
  - 1 bag of worm castings
7. In the `groceries.txt` file, add the following:
  - 4 tomatoes
  - 6 shallots
  - 1 fennel bulb
8. Make a new commit, including ONLY the changes from the `groceries.txt` file. The commit message should be "add ingredients for tomato soup"
9. Make a second commit including ONLY the changes to the `yard.txt` file. It should have the commit message "add items needed for garden box"

10. Next up, add the following line to the end of `groceries.txt`
  - couple of seed potatoes
11. In the `yard.txt` file, change the first line so that it says "3 bags of potting soil" instead of "2 bags of potting soil"
  - 3 bags of potting soil
  - 1 bag of worm castings
12. Make a commit that includes the changes to BOTH files. The message should read "add items needed to grow potatoes"
13. Use a Git command to display a list of the commits. You should see 4!
